Local galaxy group

The majority of galaxies form groups held together by gravity. Some groups are really gargantuan in size, e.g., groups in Virgo and Berenice's Hair constellations feature thousands of galaxies stretched over some 20 million light years. Smaller galaxy groups do exist, an example is our own galaxy - the Milky Way. This group, called Local Group, comprises some 30 galaxies stretched over some 5 million light years. The most famous galaxies of the Local Group are Milky Way, Andromeda, and M33 galaxy in the Triangulum constellation. The groups themselves form less thick groups, called supergroups. The latter are the greatest objects in the Universe, stretched over hundreds of millions of light years. The Local Group is a part of the Local Supergroup, the center of which is located in the group in Virgo constellation.

Facts & figures

Galaxy name	Distance (light years)	Diameter (light years)	Luminosity (millions of Suns)	Type
Milky Way	0	300 000	15 000	Spiral
Comae Magellanic Cloud	170 000	30 000	2 000	Irregular/Spiral
Lesser Magellanic Cloud	190 000	20 000	500	Irregular
Draconis	300 000	3 000	0,1	Elliptical
Carina	300 000	3 000	0,01	Elliptical
Sculptor	300 000	6 000	1	Elliptical
Sextans	300 000	3 000	0,01	Elliptical
Ursa Major	300 000	2 000	0,1	Elliptical
Fornax	500 000	6 000	12	Elliptical
Leo I	400 000	2 000	0,6	Elliptical
Leo II	600 000	2 000	0,4	Elliptical

Local galaxy group
